What makes this project special?

A large, stepped raised decking area constructed over a steep and unsightly garden bank.

About the installation

The householder asked Cheltenham Fencing local network installer member Leon Piercy Landscapes to quote and then construct a spacious seating area to the rear of their home, so they could better enjoy their stunning views across Staverton and Cheltenham.

A stepped decking area was recommended to create a new room outside and the result is a superb example of how to make the most of a difficult area in a garden.

Product detail:

The complex decking frame was constructed from decking joists and 100mm PermaTimber posts. Floored in high quality, Scandinavian Redwood decking board, finishing touches included the use of half round poles to clad the frame and ballustrading to create a safe environment to work, rest or play.

Good to know:

Incised and pressure treated PermaTimber Posts are guaranteed against fungal decay and wood destroying insects for 15 years, carry WPA Benchmark approval and are FSC Certified.
